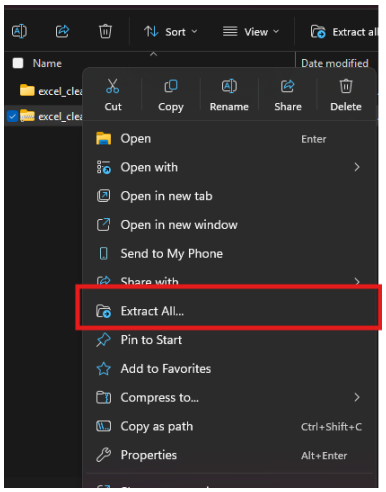
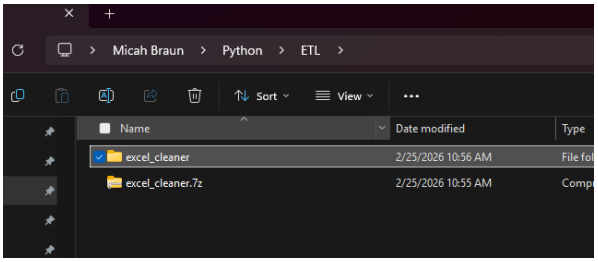
File Cleaner Tool Use

Installing the Tool:

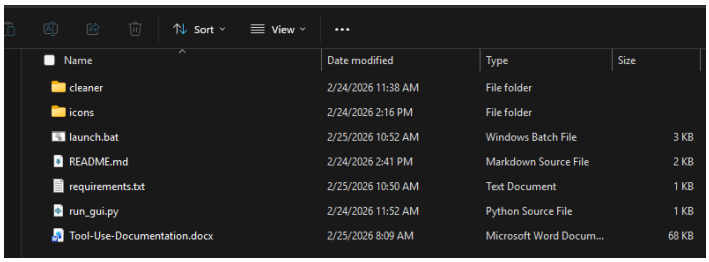
1. The program - if sent via a .ZIP file - will need to be extracted. To extract, right-click the downloaded file and select “Extract All...”:



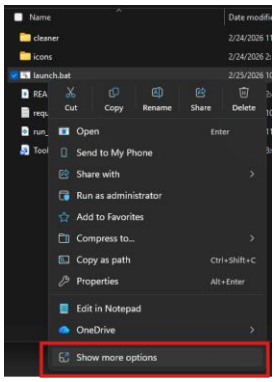
2. Select the file destination where you would like the extracted files to be stored.
3. Open the extracted file:



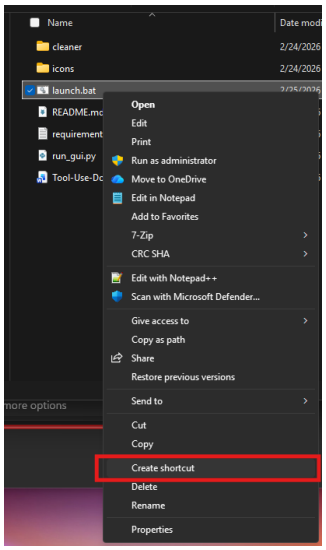
4. You should see a list of files and folders now. Do not be afraid! They cannot hurt you.
5. Select the file named “launch.bat” but do not double-click it. We will first create a program shortcut that you can store on your Desktop for ease of use:



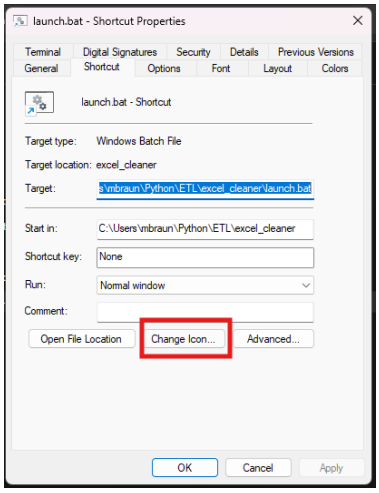
6. Right-click “launch.bat” and select “Show more options”:



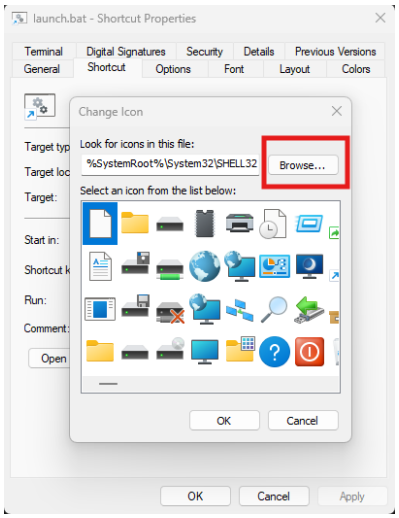
7. Select the option “Create shortcut”:



8. You can rename the shortcut to whatever name you’d like. You can also upload a different icon for it to make it easier to see/remember. I included an icon picture you can use, but any .ico file *should* work. If you want to use the file I included, right-click the shortcut you created in Step 7 and select the Properties option, and then select “Change Icon”:



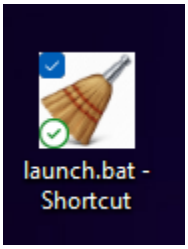
9. Another dialogue box will open with different system icons and the option to load a custom one from your computer. If you want to use the custom one, select the “Browse” button:



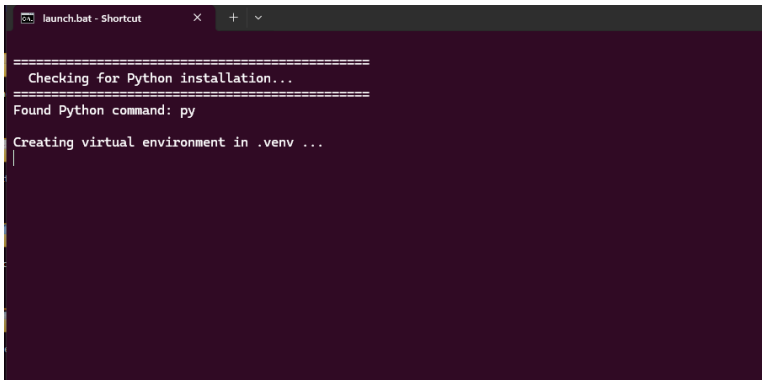
10. Browse to the extracted folder where we started (should be named “excel_cleaner”) and select the folder named “icons” and open that folder, there should be an image called “cleaner_icon.ico”. Select that file and then you will press “Ok” on the Change Icon dialog box.
11. You will be back to the Properties dialog box, press “Apply” in the bottom righthand corner. And then press “Ok”. You can now put that shortcut on your Desktop or wherever you find most useful.

Launching the tool:

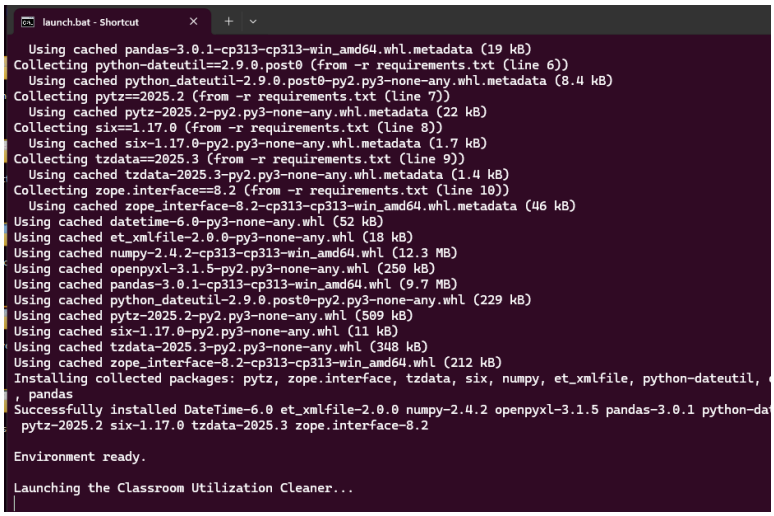
1. Double-click program shortcut:



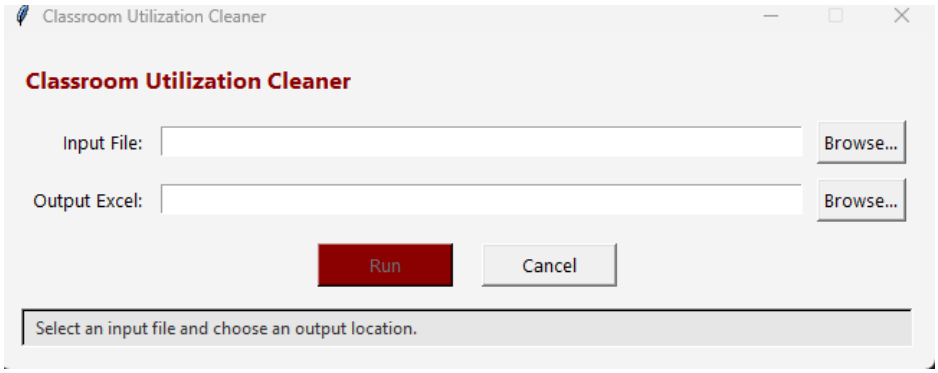
2. If you are running for the first time, the program is going to need to install dependencies that the tool relies on to run. To do this, it will go through a list of things it needs to get and ensure they are downloaded into a folder it will automatically create called “.venv” (short for “virtual environment”). This could take several minutes depending on your computer’s internet connection and device speeds. When it first starts it will look something like this:



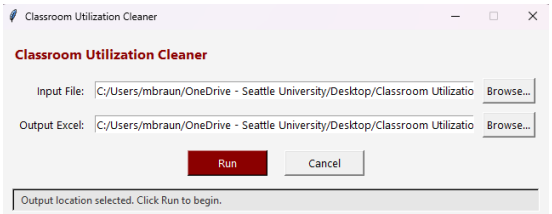
3. When the installations have completed, you should see something like this:



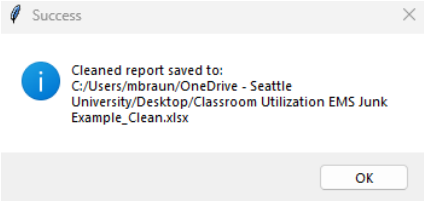
4. The program should automatically launch and you should see something like this:



5. To load the junk file from EMS select the “Browse” button for the “Input File” field.
6. To select where the cleaned-up version will go, select the “Browse” button for the “Output Excel” field.
7. With these 2 fields completed, not press “Run”



8. If there were issues with the process you will see an error dialog box, otherwise you should see the Success dialog box:



9. Select “OK”
10. You will be prompted for a “Yes/No” on if you have other files you want to clean. If you select “Yes” you will back to Step 4 and choose more files. If you select “No” the program should close.
